

Chinese NUSPEE Exams QAE Data

Catalog no.: KS2025M01

Description:

This dataset offers a comprehensive collection of Question, Answer, Explanation (QAE) triplets drawn from China's National Unified Subjects of the Postgraduate Entrance Exam (NUSPEE, 研究生考试全国统一命题科目), the standardized national assessment required for admission to master's degree programs across China.

The Postgraduate Entrance Exam (PEE), commonly known as 考研 (Kaoyan), is a highly competitive exam taken by millions of candidates each year as a prerequisite for graduate study in China.

The PEE consists of two main components. The first is the National Unified Subjects (NUSPEE), designed and administered by the Ministry of Education Examination Center (教育部考试中心). Covering approximately 16 subjects, the NUSPEE serves as China's nationwide academic benchmark, comparable to standardized tests such as the GRE, GMAT, or LSAT.

The second component is the University-Specific Exams (USSPEE), created and administered by individual universities, covering a much broader range of academic disciplines tailored to each institution's requirements.

This dataset covers the NUSPEE exams. USSPEE exams are provided in separate datasets, such as the *Chinese USSPEE Exams QAE Data* (Catalog No. KS2025M02).

To date, this is the most comprehensive publicly available archive of NUSPEE exams, with materials for some subjects dating back to 1987. It contains 428 complete exams spanning a wide range of disciplines, including:

- Mathematics (Test I) — for applicants in science, engineering, and technology
- Mathematics (Test II) — for applicants in economics, finance, and management
- Mathematics (Test III) — for applicants in applied mathematics and statistics
- Mathematics for Agricultural Sciences applicants
- Chemistry for Agricultural Sciences applicants
- Plant Physiology and Biochemistry
- Animal Physiology and Biochemistry
- Western Medicine
- Traditional Chinese Medicine
- Law (Legal Studies Track)
- Law (Non-Legal Studies Track)
- Computer Science

- Ideological and Political Theory
- Management Aptitude Test
- Education
- Psychology
- History

This dataset excludes language exams such as English, Russian, and Japanese, which are part of the National Unified Subjects.

The QAE triplets were extracted from original PDF or MS Word exam files, with each entry including the question, the correct answer, and—where available—a detailed explanation outlining reasoning steps or solution processes. The vast majority of the question-answer pairs also come with explanations, making the dataset particularly valuable for AI training and evaluation.

Data Format:

Each data item is released in two formats: a machine-readable .json (JavaScript Object Notation or JSON) file and a human-readable .md (Markdown) file. Both contain the same underlying content: metadata of the exam and QAE triplets. Mathematical formulas are provided in LaTeX format. Figures are saved as image files, with embedded links included in the JSON and Markdown files.

For convenience, each data item is released in two formats: a machine-readable .json (JavaScript Object Notation or JSON) file and a human-readable .md (Markdown) file. The JSON files are designed for computer processing, making them suitable for automated workflows and data pipelines. The Markdown files present the same information in a more accessible form, ideal for manual inspection and review. They render LaTeX math formulas and display embedded images, providing a clearer, publication-style view of the data.

To view Markdown files in rendered format, you can use common tools such as Visual Studio Code (VS Code) with Markdown preview enabled, or lightweight editors like Typora, which provide real-time rendering of markdown files.

Alternatively, you can open Markdown files in any basic text editor (e.g. Notepad++), though you will not see the rendered formatting.

Corpus Notes:

There are six exams in the corpus that do not have any associated images, and so their image directories are expected to be empty:

```
./data/NUSPEE_exam_0001/images/
./data/NUSPEE_exam_0002/images/
./data/NUSPEE_exam_0003/images/
./data/NUSPEE_exam_0005/images/
```

./data/NUSPEE_exam_0009/images/
./data/NUSPEE_exam_0010/images/

Language:
Chinese

Data Volume:
428 exams with a total of 24,700 QAE triplets.

Data Source:
Ministry of Education, People's Republic of China
