

2023 年硕士研究生招生考试试题

【B】卷

科目代码及名称：211 翻译硕士英语

考生须知

1. 答案须写在报考点提供的答题纸上，一律使用黑色钢笔或签字笔。
2. 考毕，请将试题和答卷放入试题袋内密封后，在封条与试卷袋骑缝处亲笔签名。

Part I. Multiple-choice (20 points, 1 point for each)

Directions: There are twenty multiple-choice questions in this part. Choose the best answer to each question. Please write your answers on the Answer Sheet.

1. My cousin likes eating very much, but he isn't very ____ about the food he eats.
A. special B. peculiar C. particular D. specific
2. ____ he needed money for a new car, he decided not to borrow it from the bank.
A. Much as B. Much though C. As much D. Though much
3. The ____ family in Chinese cities now spends more money on housing than before.
A. normal B. average C. usual D. general
4. ____, he is ready to accept suggestions from different sources.
A. Instead of his contributions B. For all his notable contributions
C. His making notable contributions D. However his notable contributions
5. All the rooms on the second floor have nicely ____ carpets, which are included in the price of the house.
A. adapted B. equipped C. suited D. fitted
6. ____ wool that is produced in ____ Scotland is used to make sweaters and other garments.
A. / ... the B. / ... / C. The ... the D. The ... /
7. The Minister of Finance is believed ____ of imposing new taxes to raise extra revenue?
A. that he is thinking B. to be thinking C. that he is to think D. to think
8. Let your breath out slowly, feeling the stress leave your body as you ____.
A. exhaust B. exhale C. inhale D. hale
9. My mother can't get ____ because she has rheumatism.
A. about B. on C. through D. in
10. The plane had to make an emergency landing because of ____ problems.
A. machinery B. technology C. technical D. mechanical
11. He plays tennis to the ____ of all other sports.
A. eradication B. exclusion C. extension D. Inclusion

12. We'll be very careful and keep what you've told us strictly _____.
A. rigorous B. confidential C. private D. mysterious
13. I really regretted my mistake. It was one that I _____.
A. ought not to be making B. mustn't make
C. had not to make D. ought not to have made
14. _____ that they may eventually reduce the amount of labor needed on construction sites by 90 percent.
A. So clever are the construction robots B. So clever the construction robots are
C. Such construction robots are clever D. Such clever construction robots are
15. Due to personality _____, the two colleagues never got on well in work.
A. contradiction B. conflict C. confrontation D. competition
16. It is futile to discuss the matter further, because _____ going to agree upon anything today.
A. neither you nor I are B. neither you nor me is
C. neither you nor I am D. neither me nor you are
17. Allegory is a literary device _____ another level of meaning is concealed within what is usually a story.
A. at which B. to which C. by which D. in which
18. When he became famous, he had people _____ him in the street and _____ for his autograph.
A. stop...asking B. stopping...ask C. to stop...to ask D. stopping...asking
19. First designated in 1970, Earth Day has become an annual international event _____ concerns about environmental issues such as pollution.
A. dedicated to raise B. dedicated to raising
C. dedicating to raising D. to be dedicated to raising
20. He was always _____ with international affairs and in particular France's role in the world.
A. agitate B. cowered C. endured D. intrigued

Part II. Reading Comprehension (30 points, 2 points for each)

Directions: There are 3 passages in this part. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A, B, C and D. You should decide on the best choice and write your answers on the Answer Sheet.

Passage one

Questions 21 to 25 are based on the following passage.

In terms of pure quantity of research and debate, business schools have performed amazingly in promoting management as a distinctive activity. No other discipline has

produced as much in such a short period. It is unclear yet how much of it will stand the test of time, but for sheer industry, the business schools deserve credit. Not a day goes by without another wave of research papers, books, articles, and journals.

In these terms, schools have produced a generally accepted theoretical basis for management. When it comes to knowledge creation, however, they find themselves in difficulties. They are caught between the need for academic rigour and for real-world business relevance, which tend to pull in opposite directions. The desire to establish management as a credible discipline leads to research that panders to traditional academic criteria. The problem for business school researchers is that they seek the approval of their academic peers rather than the business community. In the United States this has led to the sort of grand ‘paper clip counting’ exercises that meet demands for academic rigour but fail to add one iota to the real sum of human knowledge.

Business schools have too often allowed the constraints of the academic world to cloud their view of the real world. Business school researchers seek provable theories—rather than helpful theories. They have championed a prescriptive approach to management based on analysis and, more recently, on fashionable ideas that soon disappear into the ether. The ‘one best way’ approach encourages researchers to mould the idiosyncrasies of managerial reality into their tightly defined models of behaviour. Figures and statistics are fitted into linear equations and tidy models. Economists and other social scientists label this cure smoothing. Meanwhile, reality continually refuses to co-operate.

Central to this is the tension between relevance and rigour. In a perfect world, there would be no need to choose between the two. But in the business school world, the need to satisfy academic criteria and be published in journals often tilts the balance away from relevance. In other words, it is often easier to pursue quantifiable objectives than it is to add anything useful to the debate about management. To a large extent, the entire business school system works against useful, knowledge-creating research. Academics have five years in which to prove themselves if they are to make the academic grade. It seems long enough. But it can take two or even three years to get into a suitable journal. They therefore have around three years, probably less, to come up with an area of interest and carry out meaningful and original research. This is a demanding timescale. The temptation must be to slice up old data in new ways rather than pursue genuinely groundbreaking, innovative research.

It is a criticism also made by some business school insiders. “Academic journals tend to find more and more techniques for testing more and more obscure theories. They are asking trivial questions and answering them exactly. There has to be a backlash,” says Julian Birkinshaw of London Business School. In large part, the problem goes back to a time when business schools were trying to establish themselves. Up until the 1960s, American business schools were dismissed as pseudo-academic institutions, including the universities of which they often formed a part, regarded them as a little more than vocational colleges. Since then, most of the leading schools have undergone major reassessments and introduced sweeping

changes. However, it is questionable whether those changes have gone far enough.

21. What does the first paragraph suggest about the research generated by business schools?
- A. Its quality is variable.
 - B. Its lasting value is uncertain.
 - C. It has always been produced too quickly.
 - D. It has had no influence on management.
22. In paragraph two, the writer argues that business school research _____
- A. takes a negative view of the business community.
 - B. has failed to give credibility to management as a discipline.
 - C. is directed at the wrong audience.
 - D. does not stand up to academic scrutiny.
23. In the third paragraph, the writer criticizes the theories of management produced by business schools for being _____
- A. incomprehensible.
 - B. contradictory.
 - C. vague.
 - D. inflexible.
24. In the fourth paragraph, the writer says that the business school system causes academics to _____
- A. be satisfied with reinterpreting previous research.
 - B. avoid complicated business issues.
 - C. concentrate on very narrow fields of study.
 - D. focus on topics no longer relevant to business needs.
25. What do we learn about business schools in the last paragraph?
- A. They are reluctant to admit to failings.
 - B. They resent criticism of their academic journal.
 - C. They used to be looked down on by other institutions.
 - D. They are comfortable with the current situation.

Passage two

Questions 26 to 30 are based on the following passage.

We manage our own careers now. So knowing how to brand and position yourself in the market as “Me plc” at different stages of your working life is becoming an increasingly vital skill. At least that is what image expert Mary Spillane believes, “employment as we know it is decreasing. Jobs don’t exist, work exists. In the next decade most of us will be suppliers, not staff. We will have clients not bosses. If you are under 30, you probably know that there is only one firm to join for life: Me plc. It promotes you and your potential to others.”

“We’re working in multi-national, multicultural, multi-corporate teams and it’s important

to understand the implications of this. We need to create a personal brand that is unique, but complements the brand of the corporation we are working for. You have to find a way to do it so that you are not just a typical employee,” advises Spillane. “You have to decide what central values you want to project, and also what may need to alter from situation to situation.”

Many people only remember Mary Spillane for the years she spent running a cosmetics company, but she actually has master’s degrees in information science and politics. She used to hide that hard-hitting side, but is now eager to show it and forget about cosmetics. “Now that I’m working in the boardrooms of major plcs and global companies, I’m playing up my degrees and management background so that the image side is seen only as an addition to the value side,” says Spillane.

Some contracts take longer than others. “The City law firms I’m currently working for are really difficult because they don’t have any idea of what their brand should be, and are still very traditional even when talking about becoming modern. I’m showing them how to do everything from changing their reception areas—which tend to be very off-putting with their high-fronted reception desks—to how to make small talk that is less formal and rigid. Companies rebrand themselves all the time, spending millions on new office interiors and so on. But without an underlying change of attitudes, it can prove an empty exercise.”

She argues that for individuals too, there must be more than a surface change, as rebranding goes deeper than a mere change of wardrobe. Beyond advice on appearance, she tells clients, “Remind yourself of what you are selling: the personal values that comprise your brand. Learn to present yourself in a way that will project what you want to deliver. Lifelong learning is essential, together with the sort of discovery and adventure that promote personal growth. Always have an up-to-the-minute CV ready to print out, refreshing it every few months with your most recent achievements, just to remind others of your brand value.”

She believes it is essential that you understand both your public self and your private self, as well as your blind spots and your potential, in order to create an effective brand. The public self is the image you project to the world, the private self is what you know about yourself but others don’t, and blind spots are those things that others see about you but you can’t see for yourself. By deciding what image you want other people to see, emphasizing more of your private self and sorting out a few blind spots, you will increase not only your potential to influence others, but also your self-esteem and self-confidence.

26. In the first paragraph, Mary Spillane says people should learn how to market themselves because _____

- A. it encourages companies to give them a job for life.
- B. in the future it will be a company requirement.
- C. in many careers it is becoming difficult to succeed.
- D. it will help them adapt to developments in the job market.

27. Spillane says that, when creating a personal brand, it is important to _____
- A. change things depending on the circumstances.
 - B. decide what image people would like you to present.
 - C. make sure that colleagues feel at ease with your image.
 - D. follow the example of someone in the company you work for.
28. What do we learn about Spillane in the third paragraph?
- A. She is embarrassed about her career with a cosmetics company.
 - B. She doesn't like talking about her academic background.
 - C. She has qualifications many people are unaware of.
 - D. She worries about how other people see her.
29. Which problem does Spillane refer to when talking about the companies she is presently working with?
- A. They find it difficult to accept her ideas.
 - B. They are unaware of how to rebrand themselves.
 - C. They don't want to spend large amounts of money.
 - D. They are unwilling to modernise their work environment.
30. When advising people on rebranding themselves, Spillane tells them to _____
- A. attend courses to gain specialist skills.
 - B. update regularly their written proof of what they can do.
 - C. try out different ways of presenting themselves to others.
 - D. remember that what they look like is the most important point.

Passage three

Questions 31 to 35 are based on the following passage.

Joy and sadness are experienced by people in all cultures around the world, but how can we tell when other people are happy or despondent? It turns out that the expression of many emotions may be universal. Smiling is apparently a universal sign of friendliness and approval. Baring the teeth in a hostile way, as noted by Charles Darwin in the nineteenth century, may be a universal sign of anger. As the originator of the theory of evolution, Darwin believed that the universal recognition of facial expressions would have survival value. For example, facial expressions could signal the approach of enemies (or friends) in the absence of language.

Most investigators concur that certain facial expressions suggest the same emotions in a people. Moreover, people in diverse cultures recognize the emotions manifested by the facial expressions. In classic research Paul Ekman took photographs of people exhibiting the emotions of anger, disgust, fear, happiness, and sadness. He then asked people around the world to indicate what emotions were being depicted in them. Those queried ranged from European college students to members of the Fore, a tribe that dwells in the New Guinea highlands. All groups including the Fore, who had almost no contact with Western culture, agreed on the portrayed emotions. The Fore also displayed familiar facial expressions when

asked how they would respond if they were the characters in stories that called for basic emotional responses. Ekman and his colleagues more recently obtained similar results in a study of ten cultures in which participants were permitted to report that multiple emotions were shown by facial expressions. The participants generally agreed on which two emotions were being shown and which emotion was more intense.

Psychological researchers generally recognize that facial expressions reflect emotional states. In fact, various emotional states give rise to certain patterns of electrical activity in the facial muscles and in the brain. The facial-feedback hypothesis argues, however, that the causal relationship between emotions and facial expressions can also work in the opposite direction. According to this hypothesis, signals from the facial muscles (“feedback”) are sent back to emotion centers of the brain, and so a person’s facial expression can influence that person’s emotional state.

Consider Darwin's words: “The free expression by outward signs of an emotion intensifies it. On the other hand, the repression, as far as possible, of all outward signs softens our emotions.” Can smiling give rise to feelings of good will, for example, and frowning to anger?

Psychological research has given rise to some interesting findings concerning the facial-feedback hypothesis. Causing participants in experiments to smile, for example, leads them to report more positive feelings and to rate cartoons (humorous drawings of people or situations) as being more humorous. When they are caused to frown, they rate cartoons as being more aggressive.

What are the possible links between facial expressions and emotion? One link is arousal, which is the level of activity or preparedness for activity in an organism. Intense contraction of facial muscles, such as those used in signifying fear, heightens arousal. Self-perception of heightened arousal then leads to heightened emotional activity. Other links may involve changes in brain temperature and the release of neurotransmitters (substances that transmit nerve impulses.) The contraction of facial muscles both influences the internal emotional state and reflects it. Ekman has found that the so-called Duchenne smile, which is characterized by “crow’s feet” wrinkles around the eyes and a subtle drop in the eye cover fold so that the skin above the eye moves down slightly toward the eyeball, can lead to pleasant feelings.

Ekman’s observation may be relevant to the British expression “keep a stiff upper lip” as are commendation for handling stress. It might be that a “stiff” lip suppresses emotional response—as long as the lip is not quivering with fear or tension. But when the emotion that leads to stiffening the lip is more intense, and involves strong muscle tension, facial feedback may heighten emotional response.

31. The word *despondent* in the passage is closest in meaning to _____.

A. curious B. unhappy C. thoughtful D. uncertain

32. The author mentions “Baring the teeth in a hostile way” in order to _____.

- A. differentiate one possible meaning of a particular facial expression from other meanings of it
- B. support Darwin's theory of evolution
- C. provide an example of a facial expression whose meaning is widely understood
- D. contrast a facial expression that is easily understood with other facial expressions
33. The word *concur* in the passage is closest in meaning to _____.
A. estimate B. agree C. expect D. understand
34. According to paragraph 2, which of the following was true of the Fore people of New Guinea?
A. They did not want to be shown photographs.
B. They were famous for their story-telling skills.
C. They knew very little about Western culture.
D. They did not encourage the expression of emotions.
35. According to the passage, what did Darwin believe would happen to human emotions that were not expressed?
A. They would become less intense.
B. They would last longer than usual.
C. They would cause problems later.
D. They would become more negative.

Part III. Proofreading and Error Correction (10 points, 1 point for each)

Directions: The following passage contains 10 errors. Each indicated line contains a maximum of ONE error. In each case, only ONE word is involved. You should proofread the passage and correct it. Please write your answers on the Answer Sheet.

James Williams told me I had made a fundamental mistake
in Provincetown. He was a senior Google strategist for many years,
and he left, horrifying, to go to Oxford University, to study human 36.____
attention, and figure out what his colleagues in Silicon Valley have
done to them. He told me a digital detox is “not the solution, for the 37.____
same reason that wearing a gas mask for two days a week outside
isn't the answer for pollution. It might, for a short period of time, 38.____
keep, at an individual level, certain effects at bay. But it's not
sustainable, and it doesn't address the systemic issues.” He said
our attention is being deeply altered by huge invasive forces in the
wider society. Saying the solution is primary to personally abstain is 39.____
just “pushing it back onto the individual,” he said, when “it's really
the environmental changes that will really make the difference.”

For a long time I didn't fully understand what this means. What 40.____
would changing our environment entail, when it came to attention, if not
each of us tries to change our own personal behavior? The answer 41.____
slowly became clear to me when I met with many people who have 42.____
designed crucial aspects of the world in which we now live. In the hills of
San Francisco and the hot, arid streets of Palo Alto, I realized that there are
six ways in which our technology, as it currently works, are harming our 43.____
ability to pay attention—and that these causes are united by one deeper
underlying force that needs to be overcome.

One of the first people to guide me on this journey was Tristan Harris,
another former Google engineer, who, after I had been interviewing him for
several years, became globally famous for appearing in the viral Netflix
documentary *The Social Dilemma*. That film explored a whole range of
ways which social media, as it is currently designed, can be destructive. 44.____
I wanted to tease in something the film largely didn't explore—its effect on 45.____
our focus. To grasp it, I think it helps to know Tristan's own story, and what
he witnessed at the heart of the machine that is repatterning the world's attention.

Part IV. Cloze (10 points, 1 point for each)

Directions: Please fill in blanks 46 to 55 of the following passage. Write your answers on the Answer Sheet.

If someone lived in the United States during the spring of 1921, it was almost impossible not to hear of, or perhaps even witness, the scientific phenomenon that was happening across much of the country at that time. The daily newspaper coverage of events was (46) enthusiastic descriptions of the situation. Within a month of each other, the two towering figures in the world of science, Albert Einstein, then Marie Curie, separately made their first ever trips to America. Einstein arrived in early April and was gone by the end of May, while Curie landed in mid-May and left for home at the end of June. Both visits were (47) by tremendous fanfare wherever these two luminaries traveled, crowds showering them with adoration the likes of which was rarely seen. It's surprising that in their overlapping time in the country they didn't have the opportunity to meet at some common (48) , but apparently their schedules were so tightly choreographed (精心安排) that it wasn't possible. If they had, there's no telling how (49) the atmosphere would have become when Radioactivity met Relativity.

Curie was a household name by then (50) her discovery, with her husband, of radioactivity and the cancer-treating element radium over twenty years before, subsequently winning two Nobel Prizes for her, one in physics and one in chemistry. The intellectual insight

that hypothesized atomic decay as the source of radioactivity was so novel a concept that the virtually (51) male domain of science could scarcely believe it had emanated from the thoughts of a woman. Einstein, eleven years Curie's junior at forty-two, was already a (52) among the scientific community but had only recently achieved worldwide notoriety a few years before with the much-publicized proof of his general theory of relativity during a solar eclipse, when his unconventional hypotheses about gravitation were (53) with photographic evidence of the bending of light by the sun. Six months after his American journey he would finally be awarded his own Nobel Prize in physics for his monumental theoretical scientific achievements.

Einstein had primarily come to America to solicit donations (54) an as yet unbuilt Hebrew University in Jerusalem, while Curie had traveled to thank the women of America for raising funds to buy the precious radium she required to keep her radiological research effort afloat. They hopped across the country in a flurry of activity, both squeezing in time to meet the newly elected president Warren Harding in Washington, D.C. Curie was feted by half a dozen women's colleges and received honorary degrees at numerous other universities, sprinkling in receipt of honors from women's scientific associations with visits to scientific laboratories and a tour of the country's dominant radium manufacturer along the way. Einstein spent larger (55) time in major Northeastern metropolitan areas and Chicago, mixing fundraising events with multiple lectures at elite scientific universities.

- | | | | |
|------------------------|-------------------|-----------------|------------------|
| 46. A) filled with | B) filled in | C) filled of | D) filled |
| 47. A) supported | B) expected | C) prepared | D) accompanied |
| 48. A) place | B) juncture | C) room | D) point |
| 49. A) supercharged | B) embarrassing | C) serious | D) depressing |
| 50. A) based in | B) based with | C) based on | D) based for |
| 51. A) exclusive | B) inclusive | C) total | D) only |
| 52. A) deity | B) teacher | C) researcher | D) author |
| 53. A) shown | B) added | C) proven | D) disapproved |
| 54. A) with support of | B) in support for | C) supported by | D) in support of |
| 55. A) period of | B) chunks of | C) \ | D) chance |

Part V. Writing (30 points)

“Parents should help to determine the future of their children instead of allowing the children to make their own decisions.”

Direction: For this part, write on the Answer Sheet an essay of at least 500 words in response to the above statement, in which you discuss the extent to which you agree or disagree with the claim made above. Use relevant reasons and examples to support your point of view.
