

2024 年 硕士研究生招生初试试题

【B】 卷

科目代码及名称：622 基础英语

考生须知

1. 答案须写在报考点提供的答题纸上，一律使用黑色钢笔或签字笔。
2. 考毕，须将试题和答卷放入试题袋内密封后加贴封条，并在封条与试卷袋骑缝处签名。

一、 阅读题（每小题 4 分，共 15 小题，共 60 分）

Passage 1

(1) In 1897, over thirty years after the end of the American Civil War, a very special monument to that war was erected opposite the Statehouse in Boston. Designed by the Irish-born sculptor Augustus Saint-Gaudens, it depicted in profile the figure of Robert Gould Shaw, the twenty-five-year-old white officer of the North's showcase black regiment, the Massachusetts 54th, leading his men through Boston on their way to South Carolina in 1863. An unusual piece of sculpture, Saint-Gaudens had worked hard to avoid representing the black troops in any kind of stereotypical manner, portraying them instead as noble patriot soldiers of the American nation. Both in its novelty and in its sentiment the monument remains impressive according to the art critic Robert Hughes, "the most intensely felt image of military commemoration made by an American."

(2) However, the Saint-Gaudens monument in no way reflected the general mood of the American people towards those black troops who had fought in the conflict. The exclusion of black troops from the national memory of the Civil War began long before the 1890s. In the Grand Review of the Armed Forces, which followed the cessation of hostilities, very few blacks were represented. Relegated to the end of the procession in "pitch and shovel" brigades or intended only as a form of comic relief, neither the free black soldier nor the former slave was accorded his deserved role in this poignant national pageant. Rather than a war fought for liberty, in which the role of the African-American soldier was pivotal, the image of the American Civil War as a "white man's fight" became the norm almost as soon as the last shot was fired.

(3) The relationship between the black soldier and the "land of the free" has always been ambiguous. The involvement of black troops in America's wars from colonial times onwards followed a depressing pattern. Encouraged to enlist in times of crisis, the African-American soldier's services were clearly unwelcome in time of peace. Despite this, the link between

fighting and freedom for African-Americans was forged in the earliest days of the American nation, and once forged proved resilient. During the colonial era, South Carolina enacted legislation that offered freedom to slaves in return for their military services. By the conclusion of the American Revolution military service was regarded as a valid and successful method of achieving freedom for the slave, as well as an important expression of patriotism and loyalty to the nation.

(4) It was unsurprising, therefore, that when hostilities commenced between North and South in 1861 blacks throughout the North, and some in the South too, sought to enlist. However, free blacks who responded to Abraham Lincoln's call for 75,000 volunteers found that their services were not required by a North in which slavery had been abolished but racist assumptions still prevailed. Instead they were told that the war was a "white man's fight," and offered no role for them.

(5) However, unless the issues of arming free blacks and of freeing the slaves were addressed, the Union stood a slim chance of success. The Union, however, showed little sign of freeing the black slaves. In the early months of the conflict the National Intelligencer reinforced the view that the war "has no direct relation to slavery. It is a war for the restoration of the Union under the existing constitution." Yet under the pressures of conflict it became increasingly difficult to maintain such a limited policy. This was particularly true for those generals in the field who found themselves having to deal with both the free black population and a growing number of slaves who, dislocated by the war, were making their way to Union lines. Whilst the Federal Government prevaricated on the question of arming blacks for a variety of mainly political reasons, the Union generals found themselves faced with a problem that required immediate resolution. Consequently, the first moves towards both arming blacks and freeing slaves during the American Civil War came not from Washington but from the front line.

(6) Initial steps in this direction proved clumsy, though an important precedent as far as the slaves were concerned was set early on in the conflict. In 1861 Benjamin Butler, in charge of Fortress Monroe in Virginia, declared that all slaves who escaped to Union lines were "contraband of war" and refused to uphold the terms of the Fugitive Slave Law, which bound him to return them to their owners. Butler's policy did not have much of an impact on attitudes in Washington, but it did reinforce the views of those who felt that slavery was of great military use to the Confederacy and ought to be attacked on those grounds alone. In Missouri in 1861, John Fremont, commander of the Department of the West, declared all slaves owned by Confederate sympathizers to be free. Lincoln insisted that Fremont modify his announcement to bring it into line with the 1861 Confiscation Act, which removed slaves only from those actively engaged in hostilities against the Union.

(7) In late March 1862, Major General David Hunter, commander of the Department of the South, emancipated all slaves held in Georgia, South Carolina and Florida, and forced as many escaped male slaves as he could find into military service. Not only was Hunter's announcement rejected by Lincoln, but the aggressive manner in which he went about recruiting blacks for the Union army served only to alienate the very people he was attempting to help. Thomas Wentworth Higginson, the white officer in charge of what became the First South Carolina Volunteers, was in no doubt that the suspicion his troops expressed towards the Federal Government was the natural "legacy of bitter distrust bequeathed by the abortive regiment of General Hunter. More successful were the efforts of Jim Lane in Kansas. A former US Senator and a brigadier general in the Union army, Lane chose simply to ignore the War Department and raised a black regiment, the First Kansas Colored Volunteers, in 1862. This regiment was finally the following year, by which time it had already active service against the Confederacy.

(8) Thanks in part to the bravery of the Massachusetts 54th, therefore, by the end of 1863 the Union army had recruited some 50,000 African-Americans—both free blacks and former slaves—to its ranks. By the end of the war this number had risen to around 186,000, of which 134,111 were recruited in the slave states. African-American troops comprised 10 percent of the total Union fighting force, and some 3,000 of them died on the battlefield plus many more in the prisoner of war camps, if they made it that far. Overall, one-third of all African-Americans who fought were casualties of the Civil War.

1. According to the passage, the pervasive mood among the American public towards black troops in the American Civil War is that_____.

- A. black soldiers' contribution to the success of the Civil War has been seriously underrated
- B. black soldiers were excluded from the Civil War
- C. blacks' military service in the Civil War was compulsory
- D. the Union wouldn't have won the Civil War if the black slaves had not been recruited

2. According to the passage, when blacks joined the Union army they found that_____.

- A. they were welcome in time of war but unwelcome in time of peace
- B. they were discriminated against
- C. they were entitled by Abraham Lincoln to become officials in the army
- D. they were welcomed as new volunteers with open arms

3. Which of the following statements is NOT true about the American Civil War?

- A. It was a war between the South Union and the North Confederate.
- B. It was a war between the North Union and the South Confederate.
- C. It was not a war to free blacks from slavery at the beginning.

D. Black troops played an important role in the war.

4.The author's attitude towards the blacks in the American Civil War is_____.

A. appreciative

B. ambiguous

C. critical

D. reserved

Passage 2

(1) In the latter part of the last century there lived a man of science, an eminent proficient in every branch of natural philosophy, who not long before our story opens had made experience of a spiritual affinity more attractive than any chemical one. He had left his laboratory to the care of an assistant, cleared his fine countenance from the furnace smoke, washed the stain of acids from his fingers, and persuaded a beautiful woman to become his wife. In those days when the comparatively recent discovery of electricity and other kindred mysteries of Nature seemed to open paths into the region of miracle, it was not unusual for the love of science to rival the love of woman in its depth and absorbing energy. The higher intellect, the imagination, the spirit, and even the heart might all find their congenial aliment in pursuits which, as some of their ardent votaries believed, would ascend from one step of powerful intelligence to another, until the philosopher should lay his hand on the secret of creative force and perhaps make new worlds for himself. We know not whether Aylmer possessed this degree of faith in man's ultimate control over Nature. He had devoted himself, however, too unreservedly to scientific studies ever to be weaned from them by any second passion. His love for his young wife might prove the stronger of the two; but it could only be by intertwining itself with his love of science, and uniting the strength of the latter to his own.

(2) Such a union accordingly took place, and was attended with truly remarkable consequences and a deeply impressive moral. One day, very soon after their marriage, Aylmer sat gazing at his wife with a trouble in his countenance that grew stronger until he spoke.

(3) "Georgiana," said he, "has it never occurred to you that the mark upon your cheek might be removed?"

(4) "No, indeed," said she, smiling; but perceiving the seriousness of his manner, she blushed deeply. "To tell you the truth, it has been so often called a charm that I was simple enough to imagine it might be so."

(5) "Ah, upon another face perhaps it might," replied her husband: "but never on yours. No, dearest Georgiana, you came so nearly perfect from the hand of Nature that this slightest possible defect, which we hesitate whether to term a defect or a beauty, shocks me, as being the visible mark of earthly imperfection."

(6) "Shocks you, my husband!" cried Georgiana, deeply hurt; at first reddening with momentary anger, but then bursting into tears. "Then why did you take me from my mother's side? You cannot love what shocks you!"

(7) To explain this conversation it must be mentioned that in the centre of Georgiana's left cheek there was a singular mark, deeply interwoven, as it were, with the texture and substance of her face. In the usual state of her complexion—— a healthy though delicate bloom——the mark wore a tint of deeper crimson, which imperfectly defined its shape amid the surrounding rosiness. When she blushed it gradually became more indistinct, and finally vanished amid the triumphant rush of blood that bathed the whole cheek with its brilliant glow. But if any shifting motion caused her to turn pale there was the mark again, a crimson stain upon the snow, in what Aylmer sometimes deemed an almost fearful distinctness. Its shape bore not a little similarity to the human hand, though of the smallest pygmy size. Georgiana's lovers were wont to say that some fairy at her birth hour had laid her tiny hand upon the infant's cheek, and left this impress there in token of the magic endowments that were to give her such sway over all hearts. Many a desperate swain would have risked life for the privilege of pressing his lips to the mysterious hand. It must not be concealed, however, that the impression wrought by this fairy sign manual varied exceedingly, according to the difference of temperament in the beholders. Some fastidious persons —— but they were exclusively of her own sex —— affirmed that the bloody hand, as they chose to call it, quite destroyed the effect of Georgiana's beauty, and rendered her countenance even hideous. But it would be as reasonable to say that one of those small blue stains which sometimes occur in the purest statuary marble would convert the Eve of Powers to a monster. Masculine observers, if the birthmark did not heighten their admiration, contented themselves with wishing it away, that the world might possess one living specimen of ideal loveliness without the semblance of a flaw. After his marriage, —— for he thought little or nothing of the matter before, ——Aylmer discovered that this was the case with himself.

5. Which of the following statements best depicts the situation in the latter part of the last century?

- A. The pursuit of scientific truth prevailed over the pursuit of carnal love.
- B. Natural philosophy had obtained absolute dominance.
- C. Scientific discoveries opened paths into the region of miracle.
- D. People were more obsessed with the passion for a soulmate.

6. According to the passage, which of the following statements is true?

- A. Aylmer loved his work more than anything else.
- B. Aylmer loved his young wife most of all.
- C. Aylmer's love was instinctive and unconditional.

D. Aylmer's love remained undecided.

7. Which of the following words is used literally, NOT metaphorically?

A. Bathe(paragraph seven).

B. Aliment (paragraph one).

C. Specimen (paragraph seven).

D. Snow (paragraph seven).

8. Which of the following is NOT true about the mark on Georgiana's cheek?

A. It was in the centre of her left cheek.

B. Georgiana's emotion radically affected the contrast between the mark and her complexion.

C. It demonstrated a fearful distinctness.

D. It approximated to a little human hand.

Passage 3

(1) Some people have a more complicated sensory life than others. Most taste tuna only when they eat it. A few, though, taste it when they hear a particular word, such as “castanet”. Others link the color red with the letter “s” or make some other inappropriate connection between stimulus and response. Such people are known as synesthetes, and the phenomenon of synaesthesia has puzzled brain scientists since it was recognized over a century ago.

(2) Most researchers in the field suspect synaesthesia is caused by crossed wires in synaesthetes' brains, but until recently they have had no way to check this hypothesis. However, the development of a technique called diffusion-tensor imaging has changed that. And researchers at the University of Amsterdam have just applied it to the brains of 18 women (the sex more likely to experience synaesthesia) who have the most common form of the condition. This is called grapheme-color synaesthesia. It is a tendency to see letters and numbers in color.

(3) Diffusion-tensor imaging measures the direction of movement of water molecules. Since the filaments that connect distant nerve cells are surrounded by fatty sheaths which restrict the movement of water, such molecules tend to move along a filament rather than out of it. The upshot is that the technique can detect bundles of such filaments running from one part of the brain to another.

(4) The grapheme-color synaesthesia was chosen to study for two reasons. One was that it is common. The other was because there is a specific hypothesis as to its cause. Earlier brain-scanning studies have shown that the part of the brain which identifies word shape is in an area called the fusiform gyrus. This is next to an area known as V4, which identifies color. Both light up simultaneously in traditional scanners when someone is experiencing grapheme-color synaesthesia, so an inappropriate link between them is an obvious thing to

look for.

(5) Diffusion-tensor imaging did, indeed, show strong connections between these two areas in the brains of the synaesthetes when they slid into the scanner and viewed color-evoking letters and numbers. Other unusual connections showed up too, suggesting the phenomenon is more complex than had been appreciated. By contrast, the brains of 18 non-synaesthetes matched with the volunteers by age and sex showed no such strong connections.

(6) And the revelations went further. Certain types of grapheme-color synaesthetes have more connectivity than others. As part of the study, researchers asked volunteers to fill out questionnaires about how they experience their color sensations. Some reported seeing color projected on to whatever word or number they were shown. Members of this group are known as “projectors”. Others, known as “associators”, reported color only in their mind's eye. Although both groups of synaesthetes had much more connectivity than non-synaesthetes, projectors had noticeably more again than associators.

(7) Researchers are not yet sure what form the stronger connections take. They could be the result of more filaments than normal connecting the areas in question. Or the filaments might be broader than normal. Or the fatty coatings of the filaments might be thicker, which would amplify the signal passing along them as well as keeping water molecules on the straight-and-narrow.

(8) How synaesthesia starts is also unclear. There is evidence of a genetic component but learning must be involved as well. People are not born with the concept of the letter “A”. And they certainly are not born with a bright-red, cherry-colored “A”—however much it feels, as synaesthetes insist, as though they were.

9. We can infer from the first paragraph that_____.

- A. the word “castanet” has something to do with tuna
- B. the letter “S” can stimulate people to think of the color red
- C. the phenomenon of synaesthesia was under study over a century ago.
- D. synaesthesia involves the stimulation that evokes the sensation of another

10. “...the development of a technique called diffusion-tensor imaging has changed that” suggests that_____.

- A. technological development has figured out the cause for synaesthesia
- B. technological development has proved the hypothesis that synaesthesia is caused by crossed wires in brains
- C. technological development has rejected the hypothesis that synaesthesia is caused by crossed wires in brains
- D. technological development has made hypothesis checking possible

11. What does the following sentence mean? “And they certainly are not born with a bright-red, cherry-colored ‘A’ — however much it feels, as synaesthetes insist, as though they were.”(Para.8)

- A. Exquisite as the sensation is, there is no connection between colors and the letter “A”.
- B. Strong as the sensation is, the connection is not an innate sense.
- C. The letter “A” can initiate the color sensations that synaesthetes claim to be existing all along.
- D. Synaesthetes insist there are intrinsic connections between the letter “A” and the cherry color.

12. The example at the end of the passage seems to suggest_____.

- A. synaesthesia is partly subject to genetic influence
- B. people don’t have the concept of the letter “A” when they are born
- C. people's concomitant sensation is usually swayed by learning
- D. the connection between the color red and the letter “A” is strong

13. Among the three groups, which one has the most connectivity, non-synaesthetes, projectors or associators?

Passage 4

(1) Socrates, son of Sophroniscus, a sculptor, was philosopher of Athens, Greece. It is said that in early life he practiced his father's art. In middle life he married Xanthippe, who is legendary as a shrew, although the stories have little basis in ascertainable fact. It is not certain who were Socrates's teachers in philosophy, but he seems to have been acquainted with the doctrines of Parmenides, Heraclitus, Anaxagoras, and the atomists. He was widely known for his intellectual powers even before he was 40, when according to Plato's report of Socrates's speech in the *Apology*, the oracle at Delphi pronounced him the wisest man in Greece. In that speech Socrates maintained that he was puzzled by this acclaim until he discovered that, while others professed knowledge without realizing their ignorance, he at least was aware of his own ignorance.

(2) Socrates became convinced that his calling was to search for wisdom about right conduct by which he might guide the intellectual and moral improvement of the Athenians. Neglecting his own affairs, he spent his time discussing virtue, justice, and piety wherever his fellow citizens congregated. Some felt that he also neglected public duty, for he never sought public office, although he was famous for his courage in the military campaigns in which he served. In his self-appointed task as

gadfly——someone annoys other people by criticizing them——to the Athenians, Socrates made numerous enemies.

(3) Aristophanes mimicked Socrates in his play *The Clouds* and attributed to him some of the faults of the Sophists——professional teachers of rhetoric. Although Socrates in fact baited the Sophists, his other critics seem to have held a view similar to that of Aristophanes. In 399 B.C. he was brought to trial for corrupting youth and for religious heresies. Obscure political issues surrounded the trial, but it seems that Socrates was tried also for being the friend and teacher of Alcibiades and Critias, both of whom had betrayed Athens. The trial and death of Socrates, who was given poison to drink, are described with great dramatic power in the *Apology*, *the Crito*, and *the Phaedo* of Plato.

(4) Socrates's contributions to philosophy were a new method of approaching knowledge, a conception of the soul as the seat both of normal waking consciousness and of moral character, and a sense of the universe as purposively mind-ordered. His method, called dialectic, consisted in examining statements by pursuing their implications, on the assumption that if a statement were true it could not lead to false consequences. The method may have been suggested by Zeno of Elea, but Socrates refined it and applied it to ethical problems.

(5) His doctrine of the soul led him to the belief that all virtues converge into one, which is the good, or knowledge of one's true self and purposes through the course of a lifetime. Knowledge in turn depends on the nature or essence of things as they really are, for the underlying forms of things are more real than their experienced exemplifications. This conception leads to a teleological view of the world that all the forms participate in and lead to the highest form, the form of the good. Plato later elaborated this doctrine as central to his own philosophy. Socrates's view is often described as holding virtue and knowledge to be identical, so that no man knowingly does wrong. Since virtue is identical with knowledge, it can be taught, but not as a professional specialty as the Sophists had pretended to teach it. However, Socrates himself gave no final answer to how virtue can be learned.

14. Which of the following is TRUE about Socrates's life?

- A. The legend of his wife was well-grounded.
- B. His intellectual powers came from various doctrines.
- C. He never thought he was the wisest man in Greece.
- D. He was titled the wisest man due to his awareness of ignorance.

15. Which of the following is NOT considered to be Socrates's mission?

- A. Searching for wisdom about right conduct.

- B. Discussing moral issues in public.
- C. Serving in military campaigns.
- D. Being a gadfly.

二、英译汉 (每小题 30 分, 共 1 小题, 共 30 分)

Cape Dorset is probably the best known of the printmaking (版画) communities. For a dozen years, prints of consistently high quality have been produced; successful experiments with stencils, etchings and engravings have added variety and interest; individual artists are receiving recognition and acclaim. As modern technology encroaches upon these formerly isolated people, the prints have become a record of an earlier life style.

When one considers the limited means available to these artists, both in obtaining materials and being exposed to print-making techniques, their success is indeed phenomenal. Graphic images had been made by Eskimo artists prior to the advent of printmaking in the Arctic, usually in the form of incised figures and designs on ivory carvings, but the idea of reproducing an image many times on paper was totally new. James Houston, then Northern Affairs Administrator at Cape Dorset, and himself an artist, guided the Eskimo artists in their first experiment, and gradually a cooperative print shop was established.

三、汉译英 (每小题 30 分, 共 1 小题, 共 30 分)

还是从火车上说起吧! 大约在我四岁多的时候, 我坐过火车。当时带我坐车的人, 是我的舅舅, 叫张全斌。我记得那时我的打扮挺滑稽的, 穿着蓝布大褂、小坎肩, 戴瓜皮小帽。那时候, 小孩儿打扮成那个样子, 够不错了。在我的童年中, 也就只有过这么一次。在火车上, 因为小, 没坐过火车, 也很少见过家里以外的人, 觉得挺新鲜。也许人在幼年时代终归想要些温暖吧! 那时舅舅抱着我, 哄着我, 我觉得很温暖。一路上吃了半斤炒栗子, 睡了一会儿觉, 就到了北京。根据这个情况, 现在估计起来, 我可能是从天津来的。我现在对我原来的父母还有个模糊不清的印象, 父亲母亲的形象还能回忆起一点儿, 但很模糊。究竟家里姓什么? 哪里人? 不知道。我只知道自己的生日和乳名。生日是自己长大以后听家里大人说的, 是农历 10 月 15 酉时生人。所以我的乳名叫“酉”, 北京人的习惯爱用儿化韵, 前面加个小, 后面加“儿”, 就叫“小酉儿”。关于我个人的历史情况, 我就知道这一些, 再多一点都记不起来了。

四、作文 (每小题 30 分, 共 1 小题, 共 30 分)

Please write an English essay on the following topic with no fewer than 400 words. In the first paragraph, you should state your central viewpoint and support it in the following paragraphs.

What's your opinion of ChatGPT?
