

五邑大学 2024 年攻读硕士学位研究生 入学考试自命题科目试卷

科目名称: 综合英语 科目代码: 904

提示: ①请把答案写在答题纸上, 写在试卷上不给分。②答案应清楚标明题号, 字迹应清晰, 卷面要整洁。③试卷满分 150 分。

Part I. Writing. (50 points)

Section I (35 points)

Direction: Most of English learning schools hire foreign teachers from English-speaking countries such as USA, UK, Canada, etc., but sometimes they don't know whether the person is good at teaching or not. Are native English teachers better than non-native English teachers? Write an essay of 400-600 words. You should supply an appropriate title for your essay. Write your essay on ANSWER SHEET.

Section II (15 points)

Direction: Assuming you are Li Ming, write a letter to your good friend Li Fang, a senior college student at university, who is considering whether to take the post graduate entrance examination or to start working after graduation. Write a composition entitled A Letter in Reply to express your opinion. You should write at least 150 words but no more than 200 words. Write your essay on ANSWER SHEET.

Part II. Reading Comprehension (30 points)

Directions: There are six reading passages in this part and each of them is followed with some questions. For each question, there are four suggested answers marked A, B, C and D. Choose the best one and write it on ANSWER SHEET.

Passage 1

They say you never escape high school. And for better or worse, science is lending some credibility to that old saw. Thanks to sophisticated imaging technology and a raft of longitudinal studies, we're learning that the teen years are a period of crucial brain development subject to a host of environmental and genetic factors. This emerging research sheds light not only on why teenagers act the way they do, but how the

experiences of adolescence—from rejection to binge drinking—can affect who we become as adults, how we handle stress, and the way we bond with others.

One of the most important discoveries in this area of study, says Dr. Frances Jensen, a neuroscientist at Harvard, is that our brains are not finished maturing by adolescence, as was previously thought. Adolescent brains “are only about 80 percent of the way to maturity”, she said at the annual meeting of the Society for Neuroscience in November. It takes until the mid-20s, and possibly later, for a brain to become fully developed.

Inside our heads an excess of gray matter (the stuff that does the processing) at the beginning of adolescence makes us particularly brilliant at learning—the reason we’re so good at picking up new languages starting in early childhood—but also particularly sensitive to the influences of our environment, both emotional and physical. Our brains’ processing centers haven’t been fully linked yet, particularly the parts responsible for helping to check our impulses and considering the long-term repercussions of our actions. “It’s like a brain that’s all revved up not knowing where it needs to go,” says Jensen.

It’s partially because of this developmental timeline that a teen can be so quick to conjure a stinging remark, or a biting insult, and so uninhibited in firing it off at the nearest unfortunate target—a former friend, perhaps, or a bewildered parent. The impulse to hurl and insult is there, just as it may be for an adult in a stressful situation, but the brain regions that an adult might rely on to stop himself from saying something cruel just haven’t caught up.

These adolescent brain developments don’t happen to all parts of the brain at the same time. “The order in which this maturation of connection goes, is from the back of the brain to the front of the brain,” says Jensen.

And one of the last parts to mature is the frontal lobe, a large area responsible for modulating reward, planning, impulsiveness, attention, acceptable social behavior, and other roles that are known as executive functions.

It’s thanks in part to the frontal lobe that we are able to schedule our time with any sort of efficiency, plan in advance to arrange for a designated driver on a night out (or stop drinking before one is over the legal limit), and restrain ourselves from getting into fights any time we get involved in an argument. Unfortunately, it’s just these sorts of behaviors that teenage brains are not fully endowed to deal with—and the consequences are potentially fatal when it comes to high-risk behavior like drinking and driving.

1. According to the passage, the emerging research _____.
 - A. has lasted ten years
 - B. has improved the imaging technology
 - C. only analyzes the reason for teens’ behaviors
 - D. reveals how the experiences of adolescence affect our future

2. According to the passage, it takes about _____ for a human brain to become fully developed.

- A. 10 years B. 15 years C. 20 years D. 25 years

3. The reason why we are particularly brilliant at learning at the beginning of adolescence is _____.

- A. there is an excess of gray matter in our heads
B. that our brains' processing centers haven't been fully linked yet
C. that we're so good at picking up new languages starting in early childhood
D. that we are used to checking our impulses and considering the consequence.

4. Thanks to the frontal lobe, we can do all the following EXCEPT _____.

- A. focusing on what we are doing
B. working out a schedule
C. avoiding high-risk behaviors like drinking and driving
D. getting into fights any time we get involved in an argument.

5. According to the passage, which of the following statements is INCORRECT?

- A. The experiences of the teen years can affect who we are in our adulthood.
B. Scientists thought that brain development had reached its maturity by adolescence.
C. The maturation of connection in brain development goes from the front of the brain to the back of the brain.
D. Teenagers tend to get involved in high-risk behaviors like drinking and driving because their brains are not mature enough to handle it.

Passage 2

Allan Metcalf's new book claims that the word "OK" is America's greatest invention. This offers a pair of provocations. How can "OK" be an invention? On a certain day, a certain guy just dreamed up the expression that has become the most frequently spoken word on the planet? And even if it is an invention, can one little word really be greater than jazz, baseball, and the telephone? Is it better than *The Simpsons*?

The answer to the first question, implausible as it sounds, is yes. In *OK: The Improbable Story of America's Greatest Word*, Metcalf locates the first use of OK in an obscure corner of a Boston newspaper on March 23, 1839.

True story: the world's most popular word began as a joke. In the later 1830s, America's newspapers had a mania for abbreviations—also, to judge by Metcalf's account, a sorry sense of humor. He devotes a chapter to trying to explain why readers of *The Boston Morning Post* might have been amused to see "O.K." used as a jokey abbreviation for "oll korrekt," an intentional misspelling of "all correct." Apparently you had to be there. But the word soon got an enormous boost from Andrew Jackson—or his

enemies, anyway. They circulated the rumor that the man of the people was barely literate and approved papers with the initials “O.K.” for “oll korrekt.” It was a hoax, Metcalf concludes, “but without it there’d be no OK.”

The word didn’t remain a joke for long. Telegraph operators began using it as a way to say “all clear.” It became ubiquitous, turning up in all corners of the world, and beyond. Metcalf points out that OK was technically the first word spoken on the surface of the moon; it also immediately preceded Todd Beamer’s heroic charge on 9/11 (“OK, let’s roll.”). To stand out in conversation now, it needs some frippery, like Ned Flanders’s “okely dokely”.

What gives this little word its immense and polymorphous appeal? Metcalf offers a couple of explanations, like its aesthetic contrasts: “A circle with an asterisk. Smooth oval, cluster of sticks. Feminine O, masculine K.” It also consists of a series of sounds that can be uttered in almost every language. Meanwhile technology continues to urge it along. Early Apple programmers let users click on two buttons: “Do It” or “Cancel”. When a tester pointed to “Do It” and asked why the computer was calling him a dolt, the “OK” button was born. Now, in the world of the ubiquitous ext message, it’s increasingly just “K.”

When you pause to consider what a weird and wonderful little word OK is, the most remarkable thing isn’t that it’s so great or that it was invented but that it’s American. To foreigners in the 20th century, Metcalf writes, the word embodies “American simplicity”, pragmatism, and optimism. To us today, the word encapsulates “a whole two-letter American philosophy of tolerance, even admiration for difference.” Metcalf’s book could use more along these lines. In a time as fractious as this, it’s encouraging to think that two little syllables can help us bridge our differences. Are there worse sayings to rally behind? You betcha.

6. Which of the following is NOT correct about the origin of the word “OK” according to Allan Metcalf?

- A. It was dreamed up by someone one day and was soon frequently spoken.
- B. It was first used in a small corner of a local newspaper in America in 1839.
- C. It soon gained a huge popularity because of Andrew Jackson or his enemies.
- D. It was known as an amusing abbreviation for an intentionally misspelled phrase.

7. Why does Americans love abbreviations in the late 1830s according to Allan Metcalf?

- A. Popularity of new words.
- B. Sick sense of humor.
- C. Boost from Andrew Jackson.
- D. Love for misspelling.

8. Which of the following statements is NOT true about the word “OK”?

- A. It has once been used for the meaning of “all correct”.
- B. It has once been used for the meaning of “all clear”.

- C. It was the first word spoken on the surface of the moon.
D. It was once used for the meaning of “okely dokely”.
9. According to the passage, which of the following statements is NOT the reason for the popularity of the word “OK”?
- A. This small word has great aesthetic contrast.
B. The sounds can be spoken in most languages.
C. It was a smooth oval and cluster of sticks.
D. Technology urges the popularity of this word.
10. According to the passage, we can learn from the word “OK” EXCEPT that _____.
- A. the Americans are simple, pragmatic and optimistic
B. the Americans are tolerant and admire the difference
C. the most remarkable thing is the fact that it’s American
D. there aren’t worse sayings to rally behind as believed by all

Passage 3

All over the world, your chances of success in school and life depend more on your family circumstances than on any other factors. By age three, kids with professional parents are already a full year ahead of their poorer peers. They know twice as many words and score 40 points higher on IQ tests. By age 10, the gap is three years. By then, some poor children have not mastered basic reading and math skills, and many never will: this is the age at which failure starts to become irreversible.

A few school systems seem to have figured out how to erase these gaps. Finland ensures that every child completes basic education and meets a rigorous standard. One Finnish district official, asked about the number of children who don’t complete school in her city, replied, “I can tell you their names if you want.” In the United States, KIPP charter schools enroll students from the poorest families and ensure that almost every one of them graduates high school—80 percent make it to college. Singapore narrowed its achievement gap among ethnic minorities from 17 percent to 5 percent over 20 years.

These success stories offer lessons for the rest of us. First, get children into school early. High-quality preschooling does more for a child’s chances in school and life than any other educational intervention. One study, which began in the 1960s, tracked two groups of students from disadvantaged backgrounds. Some were given the opportunity to attend a high-quality preschool; others were not. Thirty-five years later, the kids who went to preschool were earning more, had better jobs, and were less likely to have been in prison or divorced.

Second, recognize that the average kid spends about half his waking hours up until age of 18 outside of school—don’t ignore that time. KIPP students spend 60 percent more

time in school than the average American students. They arrive earlier, leave later, attend more regularly, and even go to school every other Saturday. Similarly, in 1996, Chile extended its school day to add the equivalent of more than two more years of schooling.

Third, pour lots of effort into training teachers. Studies in the United States have shown that kids with the most effective teachers learn three times as much as those with the least effective. Systems such as Singapore's are choosy about recruiting; they invest in training and continuing education; they evaluate teachers regularly; and they award bonuses only to the top performers.

Finally, recognize the value of individualized attention. In Finland, kids who start to struggle receive on-on-oc support from their teachers. Roughly one in three Finnish students also gets extra help from a tutor each year. If we can learn the lesson of what works, we can build on it.

11. According to the passage, the possibility of the kids' success in school and life will mostly rely on _____.

- A. school education
- B. family environment
- C. peer learning
- D. higher IQ level

12. According to the passage, which of the following statements is INCORRECT?

A. Three-year-old kids from poorer families often lag behind those professional parents.

B. Age three is very likely to be the age when failure starts to become irreversible in a kid's life.

C. The school systems in some countries have got the solution to the problem of achievement gap.

D. Very few Finish children have not completed basic education or meet a rigorous standard.

13. Which of the following approaches has NOT been mentioned by the author?

- A. To offer kids school education as early as possible.
- B. To ensure the students to get up earlier every day.
- C. To provide more effective teachers for the students.
- D. To give one-on-one support for the students in need.

14. Which of the following countries has NOT been mentioned as an example in the passage?

- A. Singapore
- B. America
- C. Chile
- D. Britain

15. Which of the following is the best title for this passage?

- A. The Best Way to Help the Poor Kids
- B. How to Upgrade the Education System
- C. How to Close the Achievement Gap
- D. The Importance of School Reform

Passage 4

For ten years, the Reader Organization has been helping some of the most vulnerable people in society feel better by carefully harnessing the power of reading. In schools, care homes, psychiatric wards and local libraries across the UK, sessions held by one of over 40 trained facilitators provide a haven for troubled kids, elderly people battling dementia and people with a range of mental illness, from depression and schizophrenia to drug addiction.

The format of the sessions is very simple. Taking it in turns to read, the facilitator and the group work through a novel or short story, pausing at key moments to share their thoughts about the story and how it makes them feel. Then they end with a poem. There is no attempt to “analyze” the texts in any academic sense, just to empathize with the characters and debate the plotlines, But then there is no “dumbing down” either—the reading list is resolutely classic, from Shakespeare to Steinbeck to Wordsworth and the Romantics.

The therapeutic benefits are two-fold. First as Jane Davis, the charity’s founder and a former literature tutor, puts it: “there is something about reading aloud, something rhythmical, comforting, childlike and secure that either directly or indirectly addresses that inner weather we all experience. That’s why people love it.”

The second, particularly for people suffering from mental health problems like those I meet in London, is the opportunity to share how they are feeling with others through a form of displacement.

The characters in *Great Expectations* or Shakespeare or any of the texts the Reader Organization use function as vessels or as Dr. Kathryn Naylor, an Associate Specialist in Forensic Psychiatry at Ashworth Hospital puts it: “a way of expressing emotions without having to say what’s really upsetting you.”

Naylor treats men who are mentally disordered offenders, and has been using The Reader Organization as a supplementary exercise with her patients (“it’s not therapy, it’s therapeutic” she explains) for many years. The results, she says, can be amazing.

A study carried out by the University of Liverpool in 2011 looked at the long term affects of participating in Get Into Reading, The Reading Organization’s flagship program, on older people living with dementia. They found that regular attendance was effective at improving the memory and concentration of patients, and had a positive long term impact on reducing symptoms such as delusion, anxiety and irritability. It concluded: “the Get Into Reading model should be extended to all care homes.”

Today, the Reader Organization has just celebrated its tenth anniversary. It now runs 100 weekly reading group in its original home of Wirral alone, and has teams set up in ten different boroughs of London and areas of South Wales, Belfast, Durham and Glasgow—as well as sister projects in Denmark and Australia.

Give it another ten years, and perhaps we'll no longer see reading as simply as a source of pleasure or a route to education but a way to tackle diseases of both the body and mind.

16. The Get Into Reading program has helped all the following groups EXCEPT _____.

- A. drug abusers
- B. people suffering from mental illness
- C. desperate criminals
- D. distressed elderly people

17. Which of the following statements is NOT true about the reading sessions given by the Reader Organization?

- A. Members take turns to read
- B. Members share with each other thoughts and feelings of the readings.
- C. Members enjoys a poem towards the end of the session.
- D. The facilitator will give a formal analysis of the readings.

18. The underlined part of the sentence "But then there is no 'dumbing down'—either the reading list is resolutely classic, from Shakespeare to Steinbeck to Words worth and the Romantics." means _____.

- A. the facilitator will keep silent through the reading session
- B. members will lower their voices during the discussion
- C. the organizer will not simplify the readings to facilitate the understanding.
- D. there is no difficult word in the stories to prevent a smooth communication among members.

19. According to the charity's founder, the success of the program mainly lies in _____.

- A. the choice classics recommended at the session
- B. good training of the facilitators
- C. the long-term strategies of the program
- D. the words and sentences resonate with their own life experiences

20. The long term benefits of the participation in the program can be proved in all the following BUT _____.

- A. members find it easier to focus on what they are doing
- B. members can remember more things in their daily life
- C. the participants can improve their quality of life
- D. the organization had a thriving development

Passage 5

It's normal for your muscles to lose tone when you sleep—that's why people in meetings nod off so amusingly. But in as many as 10 percent of middle-aged and older adults, the throat muscles relax so much that the airway repeatedly closes up, a condition

that can be deadly, as it turns out. According to a study published this week in the *New England Journal of Medicine*, obstructive sleep apnea sharply increases the risk of stroke or death.

People with sleep apnea often don't realize they have it, since they don't remember waking up again and again, gasping for breath. Often, it's a bed partner who hears the choking and "industrial-strength snoring", says Klar Yaggi, a sleep specialist at Yale who led the study. He and his colleagues followed two groups of patients who were tested for sleep apnea were about twice as likely to have a stroke or die.

No one really knows why, although the explanation could have to do with the spikes of adrenaline that course through the body when breathing stops, increasing blood pressure, or with repeated plunges in the level of oxygen in the blood. This study didn't look at whether treatment—sleeping with a contraption that continuously blows air into the mouth—lowers risk. But losing weight will improve sleep apnea. And patients who use the machine get much more rest, Yaggi says, which should help them avoid one of the other major dangers of sleep apnea: car accidents.

Another study in the same issue of the *New England Journal of Medicine* looked at how well the continuous air treatment works for people with central sleep apnea, a different disorder altogether. In both forms of sleep apnea, you stop breathing periodically. But in central sleep apnea, the problem is not an obstructed airway but that the brain fails to send out the command to breathe. The disorder is usually caused by congestive heart failure, in which the heart doesn't pump as well as it should and fluid collects in the chest. Researchers think that providing a continuous air flow during sleep might help drive water out of the lungs and make breathing more regular.

The treatment did help people with central sleep apnea in some ways: Their hearts worked better, they didn't stop breathing as often, they didn't have adrenaline surges, and they were able to exercise more. "That's the good news," says Douglas Bradley, a pulmonologist at the University of Toronto and author of the article. "The bad news is that we didn't improve survival."

The treated patients weren't any less likely to die in the follow-up period than those who were not given the treatment. While Bradley suspects a larger study would prove a lower risk of dying, he says the benefits shown in this study aren't significant enough to recommend using the treatment routinely in people with central sleep apnea.

21. The air contraption should help patients avoid car accidents because _____.

- A. it could increase the level of oxygen in the patients' blood
- B. it could lower the risk of the occurrence of sleep apnea
- C. it could lower the risk of the patients to get more sleep and lose weight
- D. it could both help the patients to get more sleep and lose weight

22. Which one of the following statements is NOT true of Yaggi's study?
- A. The study proves that the machine could help the patients avoid car accidents.
 - B. The study verifies that losing weight could lower risk of sleep apnea.
 - C. The study argues that people with sleep apnea have more risks of death.
 - D. The study did not provide a definite answer to the cause of sleep apnea.
23. Which of the following is NOT the characteristic sleep apnea and central sleep apnea have in common?
- A. Both of them belong to the category of periodical disorder in breathing.
 - B. Both of them are still hard for patients to survive from.
 - C. Both of them could be effectively dealt with by the new treatment.
 - D. Both of them share the same cause that is rooted in the brain system.
24. The study conducted by Douglas Bradley proves the following except that _____.
- A. the central apnea is caused by congestive heart failure
 - B. the air treatment works positively in improving sleep apnea
 - C. the air treatment could help people's brain with central sleep apnea to work better
 - D. the death risk is strongly suppressed by the application of air treatment
25. Bradley thinks the treatment could not be used routinely in people with central sleep apnea because _____.
- A. the study they have carried out is not authoritative enough
 - B. the air treatment proves to have no improvement on survival
 - C. the study they have carried out is not large enough
 - D. the treatment needs further verification

Passage 6

Campaigners have reacted with dismay to a Defra announcement that farmers and greenkeepers will not be required to notify residents when they are spraying pesticides.

The British Medical Association (BMA) had advised the government that it should introduce mandatory notification of spraying to alert "vulnerable groups such as those suffering from respiratory problems". Defra's own consultation on the issue admitted that the public believed the current voluntary approach was not working and that public signs indicating spraying had taken place should be compulsory.

However, the government has ignored the public and medical profession, saying: "We do not believe it is appropriate to introduce a statutory requirement for operators to provide advance notice of planned spray operations to members of the public living adjacent to sprayed land."

Pesticide campaigners said the government was pandering to the interests of industry. "The reason they are not prepared to do anything is their ideological dislike of regulation,

it is not based on science,” said Pesticide Action Network UK (PAN-UK) policy officer Nick Mole.

The UK is required to show how it will meet new EU rules on pesticides due to come into force at the end of 2011. Defra said it only planned to make “minor changes” to existing voluntary measures, which will mean calls to ban pesticides in areas used by vulnerable groups, such as school playing fields and parks, will also be ignored.

Farming Minister Lord Henley defended the move, saying he was following “sound scientific evidence”.

“By making a small number of changes to our existing approach, we can continue to help feed a growing global population with high-quality food that’s affordable, while minimizing the risks of using pesticides,” he said.

Pesticide campaigner Georgina Downs said it was “outrageous” for Defra to suggest it had no compelling evidence to justify a ban on the use of pesticides in certain areas. “The prohibition of the use of pesticides in locality of homes, schools, children’s playgrounds, hospitals and public areas is absolutely crucial for public health protection, especially that of vulnerable groups,” she said.

Nick Mole said a “key opportunity” to bring in a targeted reduction in pesticide use and advance notification warnings had been missed. One that “gives lie to David Cameron’s view to make this the greenest government ever”.

26. What announcement made by Defra astonished campaigners?

- A. Current voluntary approach is not working well.
- B. Public signs should become compulsory.
- C. Greenkeepers should spray pesticides.
- D. Spray pesticides without any notification.

27. What did the government’s reaction to the medical suggest?

- A. Accepted B. Ignored C. Followed D. Modified

28. What did the campaigners think of government’s reaction?

- A. Government’s prompt measures solve the problem.
- B. Government pays no attention to the industry interest.
- C. Government has little knowledge of science.
- D. Government cares for industry rather than residents.

29. What does Georgina Downs think of Defra’s activities?

- A. Immortal B. Legitimate C. Proper D. Illegal

30. What’s the passage mainly about?

- A. The European Union’s rules on pesticide spraying.
- B. The UK says no to medical advice on pesticide spraying.
- C. Pesticide Campaigners’ challenges in the year.
- D. The prohibition of pesticide spraying near schools.

Part III. Vocabulary and Structures (20 points)

Directions: Identify one of the four choices A, B, C, or D which would be the best choice.

Write your answers on ANSWER SHEET.

31. Which of the following sentences is INCORRECT?
- A. One such a grammar book is enough.
B. He is a child, and must be treated as such.
C. I hope never to have another such experience.
D. I have never seen such a beautiful building.
32. All the flights _____ because of the snowstorm, we had to take the train instead.
- A. were canceled B. had been canceled
C. having canceled D. having been canceled
33. All you do now is _____ the house work before your mom arrives home.
- A. finish B. having finished C. finishing D. to have finished
34. "This idea is no more creative than that one." The sentence means that _____.
- A. both the ideas are creative B. this idea is less creative than that one
C. both the ideas aren't creative D. this idea is as creative as that one
35. An unlimited arms race _____ well increase the danger of war.
- A. may B. can C. must D. will
36. All the following sentences have an object complement EXCEPT _____.
- A. He had a strange way of making his class lively and interesting
B. I saw him doing his homework when I passed his window
C. The villagers did not allow them to build a factory there
D. The little boy didn't fall asleep until his mother told him a story
37. In "He will come *to learn driving from you*", the infinitive indicates
- A. cause B. purpose C. result D. direction
38. The harder the shrub is to grow, _____.
- A. The higher is the price B. the higher price it is
C. the higher the price is D. the higher price it would be
39. Which of the following sentences has a formal subject?
- A. It is no use trying it again. B. It was 9 o'clock when he came here.
C. It was yesterday that I met Tom. D. I find it difficult to get on with Peter.
40. Mr. Green has become bad-tempered since he indulges in gambling. He is no longer the man _____ he used to be.
- A. which B. whom C. that D. who
41. The town's only claim to _____ is that Queen Elizabeth I once visited it.
- A. fame B. honor C. reputation D. worship
42. Soon after the accident happened, the vehicles involved were _____ away.

- A. jerked B. towed C. dragged D. draped
43. Peter was charged with causing death by _____ driving.
A. venturesome B. daring C. reckless D. rash
44. We can _____ our muscles more powerfully by linking up our breathing to the exercises.
A. condense B. compress C. contract D. rash
45. The vase he bought at the street market yesterday was a _____ forgery.
A. man-made B. crude C. natural D. real
46. Being _____ about food can not only make children suffer from malnutrition but also influence their growth of intelligence.
A. peculiar B. partial C. pathetic D. particular
47. After working for the company for years, David _____ the position of manager.
A. achieved B. approached C. attained D. acquired
48. The _____ heat has dried up the pond.
A. expanded B. extensive C. intense D. intensive
49. Dreams are _____ in themselves, but, when combined with other data, they can tell us much about the dreamer.
A. startling B. harmless C. uncontrollable D. uninformative
50. Michael is holding a _____ position in the company and expects to be promoted soon.
A. minor B. inferior C. secondary D. subordinate

Part IV. Translation (50 points)

Section I (25 points)

Directions: For this part, you are required to translate the following passage from Chinese into English. Write your answers on ANSWER SHEET.

李白被誉为“诗仙”。他是一名多产的诗人，一生共创作了 9000 多首诗。由于受到儒家思想的影响，李白胸怀远大的政治理想，这都反映在了他创作的诗中。在李白的诗中，受到高度赞扬的主要是反映如下主题的诗：描写独特自然风光的，歌唱友情的，反映黎民百姓生活的和表达对战乱的忧虑的，等等。李白的诗充满了个人色彩，无拘无束、自由豪放、天马行空，但是，语言却平白朴素。因此，他是中国浪漫诗歌的重要开创者。他的代表作有《望庐山瀑布》《朝发白帝城》和《蜀道难》。

Section II (25 points)

Directions: For this part, you are required to translate the following passage from English into Chinese. Write your answers on ANSWER SHEET.

A properly conducted interview provides an opportunity for applicants to describe their previous work experiences, educational history, career interests, likes and dislikes,

etc. Here, we focus on the types of information that can be obtained from interviews. Interviews may seek the types of valuable information during an interview as described in the following paragraphs.

An applicant's technical knowledge about the position is quite important. One approach to assessing technical knowledge is to inquire about the applicant's educational history and work experience. In doing so, the interviewer attempts to determine whether applicants have acquired the necessary knowledge while in school or while working in previous jobs.

Another type of information examines the applicants' likes and dislikes, strengths and weakness, goals, attitudes, and philosophies. Such information can be quite valuable in helping an employer determine whether an applicant would "fit" in the particular context of job.
